#### **1- Regulation**

- Alternative Fuel Infrastructure European Directive (AFI) is applicable since January 2018
- Each European country has to translate this directive in national regulation
- Impurities in H<sub>2</sub> for fuel cell vehicles shall be in agreement with EN 17124 and ISO 14687
- EN 17124: Hydrogen fuel Product specification and quality assurance – Proton exchange membrane (PEM) fuel cell applications for road vehicles will be published in November 2018

INDUSTRIAL MERCHANT

#### 2 – Cost of analysis

■Between 6000 € and 11 000 € for one sample (depending of the number of samples analysed at the same time)

Cost for sampling could be added also (around 4000 €):
Man power
Sampling device cost
Transport from HRS to laboratory

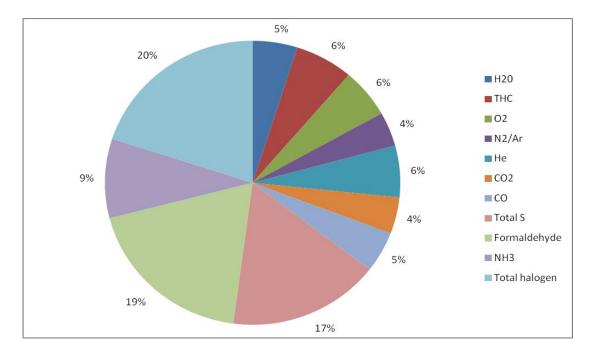

#### **Get analytical service labs are available in Europe**

QA cost vs frequency and HRS nber (80 kg H2 / HRS)

## 2 – Cost of analysis

- QA cost is impacted by
  - Number of HRS and volume of H2 per HRS
  - Number of analysis per year and per HRS (QA frequency)
  - The number and type of elements to analyse
- Maintenance cost & CAPEX lower with high number of HCS and independent of the QA frequency
- Labour and other running costs for sampling and analysis is the most contributing part of the total QA cost (above 8 HRS)

20 HCS
 21 HCS
 45 HCS

#### 3 – Quality Assurance

FCEVs:

• Make sure the H2 supplied will not damage the vehicle or affect its performance

H2 providers:

• Make sure the required specifications can be guaranteed, at an acceptable cost.

Define a QA scheme acceptable by all parties:

• Use the risk assessment for quality assurance of H2

THIS DOCUMENT IS PUBLIC ACCOrding to ISO IN THE CONTROL OF THE PUBLIC AND A CONTROL OF THE PUBLIC AND A CONTROL OF THE PARTY OF THE PAR

- Objective:
  - For each H<sub>2</sub> source : Evaluation of the risk if there are impurities above their threshold value

- Evaluation of measurement to implement quality assurance of HRS
- Risk assessment methodology according to ISO:IEC Guide 73
- 3 fundamental questions:
  - What might go wrong: which event can cause the impurities to be above the threshold value?
  - What is the likelihood (probability of occurrence) that impurities can be above the threshold value?
  - What are the consequences (severity) for the fuel cell car?

- Event : Be above the threshold value defined by ISO 14687-2 (for each impurity)
- probability of occurrence of this event for a given supply chain (production mode+

deli	Occurrence class	Class name	Occurrence or frequency	Occurrence or frequency
	0	Very unlikely (Practically impossible)	Contaminant above threshold never been observed for this type of source in the industry	Never
	1	Very rare	Known to occur in the Industry for the type of source/ Supply chain considered	1 per 1 000 000 refueling
	2	Rare	Has happened more than once/year in the Industry	1 per 100 000 refueling
	3	Possible	Has happened repeatedly for this type of source at a specific location	1 out of 10 000 refueling
	4	Frequent	Happens on a regular basis	Often

Table 2 — Occurrence classes for an impurity (EN 17124)

Step 1 : evaluation of probability of occurrence

Must be done for each facility by a team of experts or people having the knowledge of each part of the supply chain

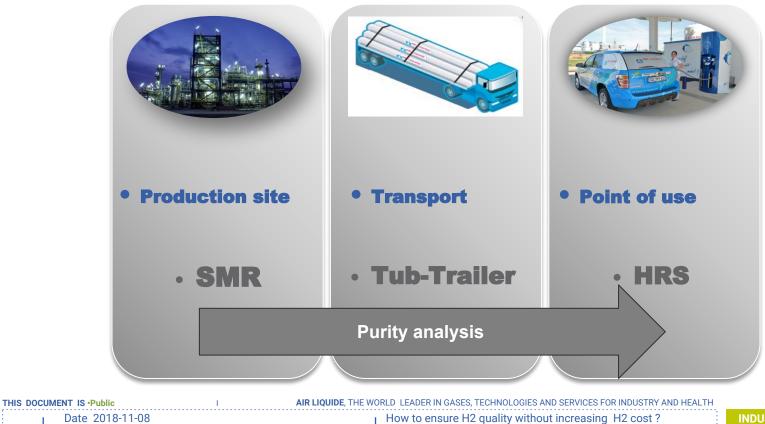

- Step 2: Combined with defined severity impact on vehicle :
- Step 3: Establish the acceptability level for this specific case
- Step 4 : Define the actions to reduce the risk
  - Step 4.1: define the barrier to reduce the risk level to acceptable level
  - Step 4.2: define the critical impurities to follow according to the results of the risk assessment

Martine Carré- Scientific director – Air Liquide R&D

AIR LIQUIDE, THE WORLD LEADER IN GASES, TECHNOLOGIES AND SERVICES FOR INDUSTRY AND HEALTH

Date 2018-11-08 Martine Carré- Scientific director – Air Liquide R&D How to ensure H2 quality without increasing H2 cost ? - Air Liquide

#### 5 – Conclusion

## Quality Risk assessment is necessary to:

- Reduce the cost of analytical control of Hydrogen quality
- Maintain a high level of guarantee for Hydrogen car manufacturers and users.
- Improve the supply chain by addition of barriers to avoid introduction of impurities.

#### Thank you for your attention
